

# A BREATHE OF FRESH AIR!

THIS PRODUCT IS PART OF THE GOLD CREST HOMES  
"GREEN FOOTPRINT COMMITMENT" TO PRESERVE  
OUR WORLD'S RESOURCES.

**According to the U.S.  
Environmental  
Protection Agency,  
indoor air quality may  
be up to five times more  
hazardous to your  
health than air directly  
outside your home.**

Indoor air quality is one of the top five environmental risks to public health, causing asthma, allergies, and other serious respiratory ailments to be on the rise. Electronic air cleaning systems are effective in reducing indoor air contaminants, but they are not a substitute for fresh air ventilation, which helps maintain the proper chemical composition of the air you breathe.

Gold Crest Homes includes an air quality system as a standard feature in each home we build. The Model 201 Air Quality System (AQS 201) introduces just the right amount of fresh air into your home on a regular basis while your heating and air conditioning system (HVAC) is running. During periods of infrequent operation, it automatically operates the blower (only), as needed, to maintain a steady influx of fresh air. The AQS201 is adjustable for use in a wide variety of homes and it meets the ventilation standards adopted by the American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE 62.2-2004.) Only the AQS201 offers optional capabilities to improve energy efficiency by blocking both the temperature and humidity extremes of the fresh air stream. Other unique capabilities include feedback and control to the homeowner via an optional Remote Panel.

Gold Crest Homes improves your indoor air quality, enhances your comfort, and saves you money. We all breathe easier.
