

Monitoring A Deadly Danger

**THIS PRODUCT IS PART OF THE GOLD CREST HOMES
"GREEN FOOTPRINT COMMITMENT" TO PRESERVE
OUR WORLD'S RESOURCES.**

The Journal of the American Medical Association recently reported that carbon monoxide poisoning is the leading cause of accidental poisoning deaths in America.

The Environmental Protection Agency lists the following as common sources of carbon monoxide: unvented kerosene and gas space heaters, leaking chimneys and furnaces, back-drafting from furnaces, gas water heaters, wood stoves, and fireplaces, gas stoves, and car exhaust trapped in garages. Because you can't see, smell, or taste the gas, carbon monoxide is very dangerous. When inhaled, the gas replaces the oxygen in your blood. Depending on how much carbon monoxide you inhale and your personal health, effects could be as mild as a headache or be fatal. The Medical Review Board of About.com believes every home should have a carbon monoxide detector installed. They are easy to install and can save the lives of your family members. **Gold Crest Homes believes our clients deserve this protection, and installs the monitors as a standard feature.**
